Pin configuration I/O-A+ and I/O-B+

Interface circuit 1a

The input can be used for both digital and analogue signals that have U_{24VIO} as reference. The circuit shall sink 8 mA when connected to U_{24VIO} or source 8 mA when connected to GND. The input shall be converted from analog voltage to digital 10 bit resolution with scaling relative to U_{24VIO} . The input shall be regarded as a power line according to "Volvo Technical Regulation 15 79 908, EMC Requirements".

Model of the input circuit:

Interface circuit 1b

The input is used for resistive sensors. The circuit shall supply 5 V through a resistor of 10 k Ω . When used to measure temperature, the output current to the sensor shall then be minimised to avoid internal power dissipation in the sensor.

Model of the input circuit:

Interface circuit 1c

The input can be used for both digital and analogue signals. The total input resistance, $R_{tot} = R // R_{A/D}$, shall be 100 k Ω < R_{tot} < 500 k Ω .

Model of the input circuit:

Interface circuit 2b

Pulse input circuit. The input can be used for both digital and analogue signals and as pulse counter input with fixed trigger level. The circuit shall sink or source 8 mA at $U_{24VIO} = 28 V$ when connected to U_{24VIO} or GND.

Model of input circuit:

Interface circuit 3a

Model of high side output stage circuit same as interface circuit 3b in Chapter 2.3.1.5.2, but without PWM capability and no biasing resistors for open circuit detection.

Interface circuit 3c

High side output circuit. The switch provides current sense signal to an A/D converter. To detect open circuit when the switch is open the interface shall sink approximately 2 mA when connected to $U_{24VIO} = 28V$ or source approximately 0.5 mA when connected to GND. The voltage shall be converted to digital 10 bit resolution with scaling relative to U_{24VIO} . The interface shall not be regarded as a power line according to "Volvo Technical Regulation 15 79 908, EMC Requirements".

Model of the output circuit:

Interface circuit 3e

Model of high side, low side output stage. This circuit is similar to circuit 4b but without PWM drive capabilities.

Interface circuit 4b

Totem pole output stage may be used as high side, low side or high/low switch. Capable of low frequency PWM driving high side or low side switch but not both synchronously. Open circuit voltage shall be approximately $9,2 \text{ V} / U_{24VIO=28V}$. When the switch is open the interface shall sink approximately 2 mA if connected to $U_{24VIO=28V}$ or source 0,5 mA when connected to GND. The voltage shall be converted to digital 10 bit resolution with scaling relative to U_{24VIO} . The interface shall not be regarded as a power line according to "Volvo Technical Regulation 15 79 908, EMC Requirements".

Model of the output circuit:

Interface circuit 4c

Model of high side, low side output stage. This circuit is similar to circuit 4b but without low side PWM drive capabilities.

Interface circuit 4d

Totem pole output stage may be used as high side, low side or high/low switch. Capable of low frequency PWM driving high side or low side switch but not both synchronously. Both switches provide current sense signal to an A/D converter. To detect open circuit when the switches are open the interface shall sink approximately 2 mA when connected to $U_{24VIO=28V}$ or source approximately 0,5 mA when connected to GND. The voltage shall be converted to digital 10 bit resolution with scaling relative to U_{24VIO} . The interface shall not be regarded as a power line according to "Volvo Technical Regulation 15 79 908, EMC Requirements".

Model of the output circuit:

Interface circuit 5

Model of a 5 V reference voltage supply for potentiometers and pressure sensors. Supply current 20 mA, current limited to < 50 mA.

Model of the output circuit:

Interface circuit 6

The pin is used for interrupt the ECU. Same interface as circuit 1a. The application software can initiate the interrupt function. The pin is used for waking-up the ECU from sleep mode.

DC DC Converter

The diagram illustrates the wiring for a DC DC Converter system. It features a central power distribution network with two DC/DC converters (DC/DC Converter1 and DC/DC Converter2) and a central 'CF RS' block. The system is powered by a 24V supply connected to a 'Jct block'. Various connectors are shown, including USB2, C_USB1_M, C_USB1_S, C_USB1_F, C_USB1_R, C_USB1_F, C_USB1_R, C_USB1_LH, C_USBF_RH, C_USBR_RH, and C_USB1_RH. Grounding points are labeled with 'gnd-Out-1-14', 'gnd-Out-2-14', 'gnd-Out-16', and 'gnd-Out-14'. The diagram is labeled 'PREVOST' and 'WCL Door'.
