Example of Wiring Diagram

Component wiring diagram title, variant/subtitle and sheet number.

Coordinates (B 1).

B+ Voltage battery with switch in ON position.
30 Voltage battery with main switch on, kl.30.
15 Voltage with starter key in drive position, kl.15.
DR Voltage with starter key in drive position, preheat position and start position, kl.DR.

Splice.

Fuse.

Reference arrow, for Diagram BA, coordinates 0 C, component A17, connector PA pin 29.

Page No
4(10)

The maximum of variants are drawn, think about that all wires and components are not standard for all markets or vehicle models.

Switch.

Relay with position.

Conductor on circuit card.

Connector MB terminal 9.

Wire area, colour and equipotential.

5(10)

Thin lines, wires.

Earth connection to circuit card.

Earth connection without wire.

Same splice can be drawn on several diagrams. The wire from the splice to the earth connection point will only be drawn and coded on one diagram. On the other diagrams will only the earth connection point be written besides the splice.

An ECU symbol with a dashed box describes that the ECU exists in several different sheets.

6(10)

Twisted wires.

inline connector symbol for power cable ring terminal.

Interface symbol.

Splice with dotted line indicates that wire already exists in some other sheet and splice is shared.

The text on either side of the inline incates that wire belongs to stated harness.
