

OLD STYLE

OLD ELE330 MOTOR

OLD PLATE
W/ VELCRO

NEW STYLE PART 1

This new style motor and snap ring assembly process eliminates the need for the aluminum plate and silicone.

NEW BOD070
SNAP RING

NEW ELE070 MOTOR

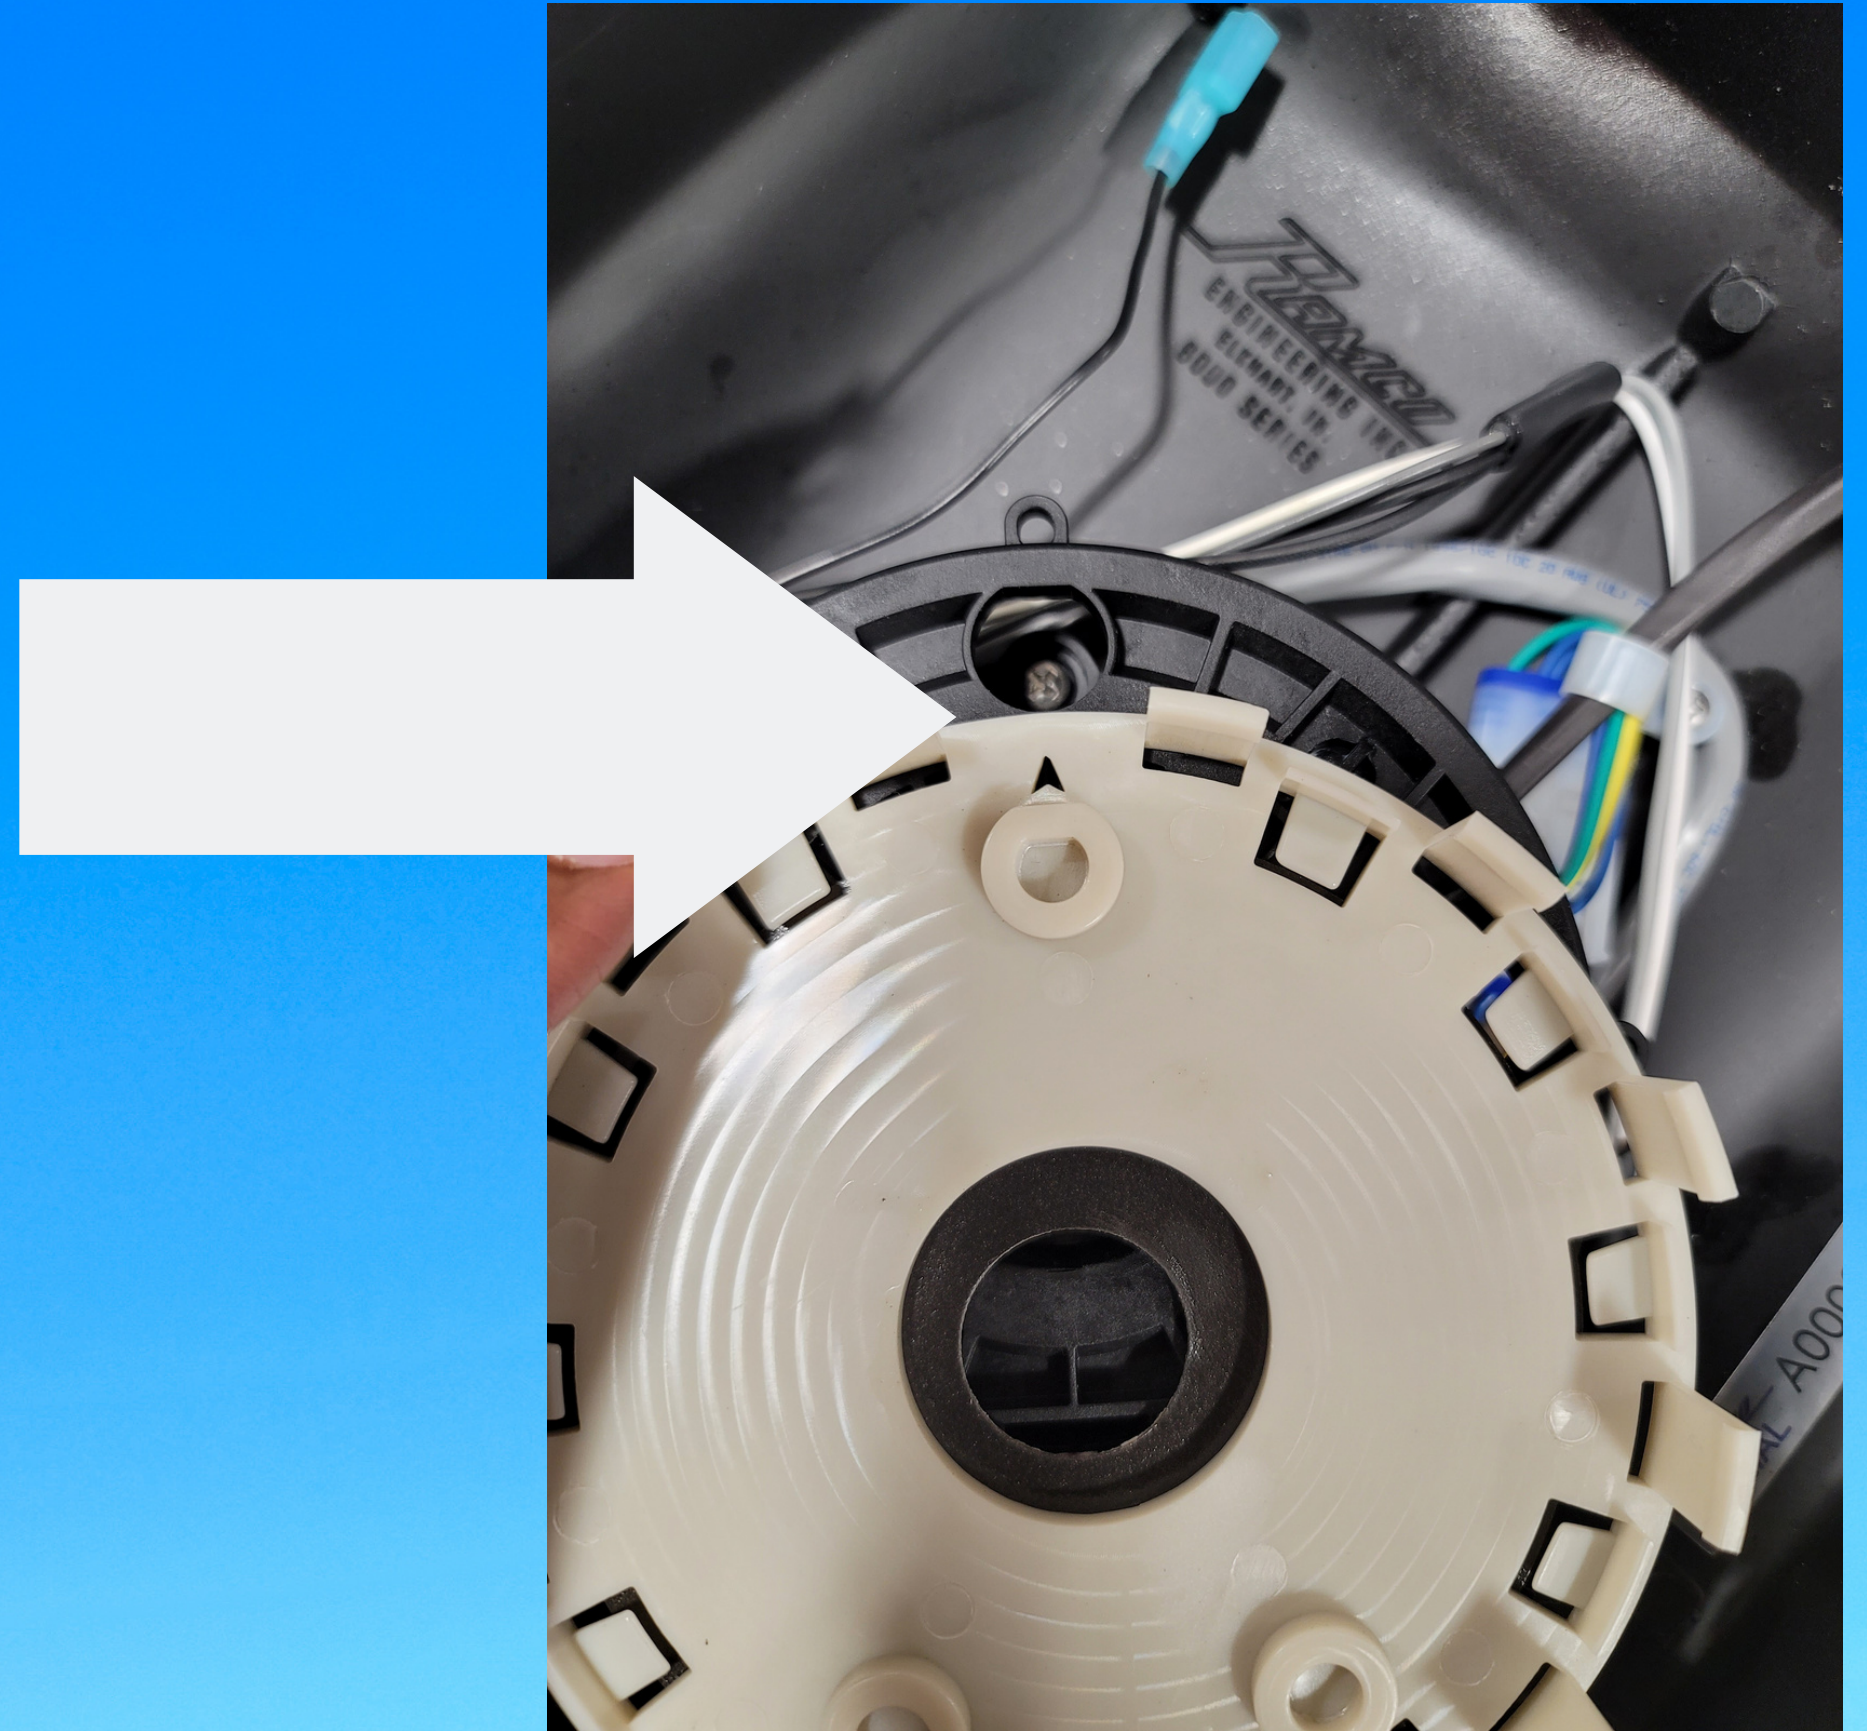

NEW STYLE PART 2

The snap ring is placed onto the rim of the motor until all clips are fully engaged.

NEW STYLE PART 3

The circle by the arrow on the snap ring should line up with the hole that has the flat part on the inside. The three circles on the inside of the snap ring only work in one configuration as well, so you will not be able to improperly install it easily.

NEW STYLE PART 4

The flat glass is then adhered to the adhesive pad on the snap ring after removing the brown paper which will expose the adhesive.

NEW STYLE PART 5

Until new part numbers are able to be created by Prevost, Ramco will mark the bottom corner of the convex skirt so that it is easily identified in the field without having to remove the mirror.
