DESCRIPTION

On vehicles affected by this recall, a Multiplex software update <u>might</u> be necessary. This update will prevent simultaneous activation of the daytime running lights and the fog lights.

To comply with the Canadian regulatory requirement, the daytime running lights shall be deactivated while the fog lights are activated by the driver.

Perform the Multiplex software validation as described in PART 1: MULTIPLEX SOFTWARE VALIDATION. Part 1 of this bulletin determines if a software update is required or not. If a software update is needed, perform PART 2. If the software is up to date, no further operation is needed.
