

| ABBREVIATION | DESCRIPTION |
|--------------|--|
| ABS | Antilock Brake System / Système de freinage antiblocage |
| A/C | Air Conditioning / Air climatisé |
| AFSS | Automatic Fire Suppression System / Système automatique de détection et d'extinction des incendies |
| ATC | Automatic Traction Control (Bendix) / Système d'antidérapage automatique |
| CECM | Chassis Electronic Control Module |
| CVC | Chauffage, Ventilation et Climatisation / heating, ventilation and air conditioning HVAC |
| DCDL | Driver Controlled Differential Lock / Verrouillage du différentiel |
| DDR | Diagnostic Data Reader |
| DEF | Diesel Exhaust Fluid / Fluide d'échappement diesel FED |
| DEL | Diode Électroluminescente / Light Emitting Diode LED |
| DID | Driver Information Display / Écran d'affichage du panneau des instruments |
| D-MIC | Driver Microphone / Microphone du conducteur |
| DPF | Diesel Particulate Filter / Filtre à particules |
| DTC | Diagnostic Troubleshooting Code / Code d'anomalie |
| DUFS | Diesel Ultra Faible en Soufre / Ultra Low Sulfur Diesel ULSD |
| ECM | Electronic Control Module / Unité de commande électronique |
| ECU | Electronic Control Unit / Unité de commande électronique |
| EECU | Engine Electronic Control Unit / Unité de commande électronique du moteur |
| EGR | Exhaust Gas Recirculation / Recirculation des gaz d'échappement |
| ESC | Electronic Stability Control / Dispositif électronique de contrôle de la stabilité |
| ESC | Escape / Échap |
| ESP | Electronic Stability Program (Bendix) / Dispositif électronique de contrôle de la stabilité |
| E+ | Eco-Roll |
| FAP | Filtre À Particules / Diesel Particulate Filter DPF |
| FDA | Following Distance Alert / Alerte de distance |
| FED | Fluide d'Échappement Diesel / Diesel exhaust fluid DEF |
| GECU | Gear selector Electronic Control Unit / Unité de commande électronique du sélecteur de vitesses |
| G-MIC | Guide Microphone / Microphone du guide |
| HVAC | Heating, Ventilation and Air Conditioning / Chauffage, Ventilation et Climatisation CVC |
| IA | Impact Alert / Alerte de collision |
| IFS | Independent Front Suspension / suspension avant indépendante |
| LED | Light Emitting Diode / diode électroluminescente DEL |
| MPH | Miles Per Hour / Milles à l'heure |
| PPT | Premium Tech Tool |
| PTO | Power Take Off / Prise de pouvoir |
| SCR | Selective Catalytic Reduction / Réduction catalytique sélective |
| TCM | Transmission Control Module / Module de commande de la transmission |
| TCS | Traction Control System / Dispositif d'antipatinage |
| TECU | Transmission Electronic Control Unit / Unité de commande électronique de la transmission |
| TPMS | Tire Pressure Monitoring System / Système de surveillance de la pression des pneus |
| TWS | Threshold Warning System / Système avertisseur du seuil de porte |
| ULSD | Ultra Low Sulfur Diesel / Diesel Ultra Faible en Soufre DUFS |
| VCADS | Outil informatisé de diagnostic |
| VEB | Volvo Engine Brake / Frein moteur Volvo |
| VECF | Vehicle Electrical Center Front |
| VECR | Vehicle Electrical Center Rear |
| VECU | Vehicle Electronic Control Unit / Unité de commande électronique du véhicule |
| VSS | Video and Sound Selector / Sélecteur audio-vidéo |
| WCL | Wheelchair Lift / Système d'élévation de fauteuils roulants |

SERVICE LITERATURE

Visit our web sit at www.prevostcar.com for on-line product information and technical publications!

Additional copies of the following service literature are available on request and at low cost. These can be helpful to mechanics and drivers alike.

- * **Maintenance Manual**
- * **Operator's Manual**
- * **Parts Manual**
- * **Service Center Directory**

To order, call Prevost Parts toll free 1-800-463-8876 or write to:

PREVOST PARTS INC.

2955-A Watt Street
Sainte-Foy, (Quebec)
Canada G1X 3W1

Specify the complete vehicle serial number. Allow 30 days for delivery

NOTICE

DECLARATION OF THE MANUFACTURING DEFECTS TO THE GOVERNMENT OF THE UNITED STATES

If you believe that your vehicle has defect which could cause a crash or could cause injury or death, you should immediately inform the National Highway Traffic Safety Administration (NHTSA) in addition to notifying Prevest.

If NHTSA receives similar complaints, it may open an investigation, and if it finds that a safety defect exists in a group of vehicles, it may order a recall and remedy campaign.

However, NHTSA cannot become involved in individual problems between you, your dealer, or Prevest Car Inc.

To contact NHTSA you may either call the Auto Safety Hotline toll-free at **1-800-424-9393** (or **366-0123** in Washington, D.C. area) or write to:

**NHTSA
U.S. Department of transportation
Washington, D.C. 20590.**

You can also obtain other information about motor vehicle safety from the Hotline.

DECLARATION OF THE MANUFACTURING DEFECTS TO THE CANADIAN GOVERNMENT

If you live in Canada, and if you believe that your vehicle has a safety defect, you should immediately inform Transport Canada and Prevest. You may write to:

**Transport Canada
Box 8880
Ottawa, Ontario, K1G 3J2**

DECLARATION OF THE MANUFACTURING DEFECTS TO PREVOST.

In addition to notify the NHTSA (or Transport Canada), please contact Prevest at **1-418-831-2046**. Or you may write to:

**Prevest
After-sales service department
850 Olivier Road,
Saint-Nicolas (Quebec)
Canada, G7A 2N1**

Troubleshooting

| Problem/Symptom | Probable Causes | Actions |
|--|---|---|
| Vehicle does not Start | Rear Start selector switch is not in the NORMAL position Master cut-out switch on the rear electrical panel is in the OFF position (down) | 1. Check that the rear start selector switch is flipped up to NORMAL start position and master cut-out switch is flipped up to ON and retry cranking 2. Flip the rear start selector switch to “Rear Start” and start the vehicle from the rear |
| | CAN network problem (Multiplex) Module A53 not powered or is defective Engine ECM does not receive the ignition signal Engine ECM is not powered | If the vehicle does not start from the rear: 1. Verify that module A53 is powered: a) Check the SYSTEM DIAGNOSTIC menu of the Driver Information Display (DID). Select FAULT DIAGNOSTIC and ELECTRICAL SYSTEM. The message “No Response ModA53, Active”, indicates a power problem on the module or a CAN network problem. b) Check / reset circuit breaker CB5 c) Check / replace fuse F65 d) Probe gray connector on module to see if it is powered. 2. Verify that the engine ECM is powered and get the ignition signal a) Check / reset circuit breaker CB8 Check / replace fuse F74 b) Check / reset circuit breaker CB2 Check / replace fuse F78 |
| None of the Multiplexed functions are operating, including the basic limp-home functions (door opening, flashers, wipers in speed 1) Three dashes “---” appear in the telltale panel instead of the outside temperature <i>Note: The sunshades are still functioning since these are not multiplexed</i> | The program version in the CECM is different than the program in the I/O modules and the CECM is forcing all I/O modules to stay inactive | 1. Engage the auto-programming of the I/O modules: Turn the ignition key to the OFF position, flip the master cut-out switch on the rear electrical panel to OFF and ON and then turn the ignition key ON. The letters CAN will appear in the telltale LCD panel for about 3 minutes. Everything shall get back to normal once the letters CAN are replaced with outside temperature display 2. Try disconnecting the green connector on the CECM and reconnect 3. If step 1 and 2 are ineffective, try disconnecting the Master ID module completely and repeat step 1 |

| Problem/Symptom | Probable Causes | Actions |
|---|--|---|
| | | <p>4. Try disconnecting the CECM completely, leave it disconnected and see if the limp-home functions (start of the vehicle from the engine compartment, wipers speed 1, flashers, etc) are functioning</p> |
| <p>Many secondary functions (not essential for driving) not functioning (interior lighting, driver's area lighting, wiper speed 2 and intermittent).</p> <p>Outside temperature display in the telltale LCD panel displays three dashes "---"</p> <p>Marker lights and clearance lights are turned ON when setting ignition to the ON position.</p> | <p>The CECM module does not receive 24 V power.</p> <p>The CAN network is not working. It could be caused by a short on the network, an open circuit, a problem with the CECM or the CECM being disconnected from the network.</p> | <p>1. Check / reset circuit breaker CB6 (3rd from the left on the junction panel) Check / replace fuse F1</p> <p>2. Operate in limp-home mode by starting the vehicle from the engine compartment (REAR START). All functions essential to drive are available</p> <p>To close and lock the door, pull the door manually up to its closed position and it will lock by itself. The door opening button is still functioning</p> |
| <p>No temperature control in the passenger area</p> <p>Passenger temperature display indicates two dashes "--"</p> | <p>Problem with the temperature sensor located in the evaporator compartment air intake or the sensor wiring</p> | <p>Instruct the driver to manually control the temperature by playing with the passenger set point. Set above 22°C (72°F) to heat and below 22° C (72°F) to cool</p> |
| <p>Entrance door does not open nor close using the control buttons</p> <p>Defroster fan not functioning</p> <p>Windshield wipers not functioning in speed 1 or intermittent</p> | <p>Module A47 is not powered or is faulty</p> | <p>1. Check the SYSTEM DIAGNOSTIC menu of the Driver Information Display (DID). Select FAULT DIAGNOSTIC and ELECTRICAL SYSTEM. The message "No Response ModA47, Active" indicates a power problem on the module. (A CAN network problem would show the same message but doesn't produce these symptoms).</p> <p>2. Check / reset circuit breaker CB6</p> <p>3. Check / replace fuse F5</p> <p>4. Probe gray connector on module to see if it is powered.</p> <p>5. Use the air release valves near the entrance door and in the front service compartment to lock / unlock the door</p> |
| <p>Windshield wipers not functioning in speed 1 or intermittent</p> | <p>No power on R23</p> | <p>Check / replace fuse F82</p> |

| Problem/Symptom | Probable Causes | Actions |
|---|--|--|
| HVAC condenser fans not functioning in speed 1 | Circuit breaker CB7 was manually tripped and not reset | Check / reset circuit breaker CB7 |
| HVAC condenser fans not functioning in speed 2 | Circuit breaker CB7 was manually tripped and not reset | Check / reset circuit breaker CB7 |
| <p>Windshield washer not functioning</p> <p>Windshield upper section de-icing system not functioning</p> <p>Defroster fan is functioning but no heat or cooling available in the driver area.</p> | Module A46 is not powered or is faulty | <ol style="list-style-type: none"> 1. Check the SYSTEM DIAGNOSTIC menu of Driver Information Display (DID). Select FAULT DIAGNOSTIC and ELECTRICAL SYSTEM. The message "No Response ModA46, Active" indicates a power problem on the module. (A CAN network problem would show the same message but doesn't produce these symptoms). 2. Check / reset circuit breaker CB1 3. Check / replace fuse F12 or F13 4. Probe gray connector on module to see if it is powered. |
| <p>Low beam headlights and front flasher on left side not functioning</p> <p>Electric horn not functioning</p> | Module A45 is not powered or is faulty | <ol style="list-style-type: none"> 1. Check the SYSTEM DIAGNOSTIC menu of Driver Information Display (DID). Select FAULT DIAGNOSTIC and ELECTRICAL SYSTEM. The message "No Response ModA45, Active" indicates a power problem on the module. (A CAN network problem would show the same message but doesn't produce these symptoms). 2. Check / reset circuit breaker CB2 3. Check / replace fuse F33 and F34 4. Probe gray connector on module to see if it is powered. |
| Low beam headlights and flasher on right side not functioning | Module A48 is not powered or is faulty | <ol style="list-style-type: none"> 1. Check the SYSTEM DIAGNOSTIC menu of Driver Information Display (DID). Select FAULT DIAGNOSTIC and ELECTRICAL SYSTEM. The message "No Response ModA48, Active" indicates a power problem on the module. (A CAN network problem would show the same message but doesn't produce these symptoms). 2. Check / reset circuit breaker CB2 3. Check / replace fuse F33 and F34 4. Probe gray connector on module to see if it is powered. |

| Problem/Symptom | Probable Causes | Actions |
|---|--|--|
| <p>Rear flashers not functioning</p> <p>Stoplights and center stoplights not functioning</p> | <p>Module A51 is not powered or is faulty</p> | <ol style="list-style-type: none"> 1. Check the SYSTEM DIAGNOSTIC menu of Driver Information Display (DID). Select FAULT DIAGNOSTIC and ELECTRICAL SYSTEM. The message “No Response ModA51, Active” indicates a power problem on the module. (A CAN network problem would show the same message but doesn't produce this symptom). 2. Check / reset circuit breaker CB2 3. Check / replace fuse F80 4. Probe gray connector on module to see if it is powered. |
| <p>Engine is overheating and radiator fan clutch does not engage</p> <p>The A/C compressor clutch does not engage</p> | <p>Module A52 is not powered or is faulty</p> | <ol style="list-style-type: none"> 1. Check the SYSTEM DIAGNOSTIC menu of Driver Information Display (DID). Select FAULT DIAGNOSTIC and ELECTRICAL SYSTEM. The message “No Response ModA52, Active” indicates a power problem on the module. (A CAN network problem would show the same message but doesn't produce this symptom). 2. Check / reset circuit breaker CB5 3. Check / replace fuse F65 4. Probe gray connector on module to see if it is powered. |
| <p>Evaporator fan not functioning</p> | <p>Circuit breaker CB3 tripped</p> <p>Module A54 is not powered or is faulty</p> | <ol style="list-style-type: none"> 1. Check / reset circuit breaker CB3 2. Check the SYSTEM DIAGNOSTIC menu of Driver Information Display (DID). Select FAULT DIAGNOSTIC and ELECTRICAL SYSTEM. The message “No Response ModA54, Active” indicates a power problem on the module. (A CAN network problem would show the same message but doesn't produce this symptom). 3. Check / reset circuit breaker CB5 4. Check / replace fuse F67 , F68 5. Probe gray connector on module to see if it is powered. |
| <p>HVAC condenser fans not functioning in speed 1</p> | <p>Module A54 is not powered or is faulty</p> | <ol style="list-style-type: none"> 1. Check the SYSTEM DIAGNOSTIC menu of Driver Information Display (DID). Select FAULT DIAGNOSTIC and ELECTRICAL SYSTEM. The message “No Response ModA54, |

| Problem/Symptom | Probable Causes | Actions |
|--|---|---|
| | | <p>Active” indicates a power problem on the module. (A CAN network problem would show the same message but doesn't produce this symptom).</p> <ol style="list-style-type: none"> 2. Check / reset circuit breaker CB5 3. Check / replace fuse F67 , F68 4. Probe gray connector on module to see if it is powered. |
| Sound system not functioning | Circuit breaker CB4 or CB11 was manually tripped and not reset | Check / reset circuit breaker CB4 or CB11 |
| Fire alarm telltale light and audible alarm always ON and there is no fire or high temperature in the engine compartment | Short-circuited fire sensor or defective sensor | Prior to start the vehicle, cycle the ignition key to the ON position, OFF position and then ON position again and then start the vehicle. This will deactivate the fire alarm function. This has to be repeated each time the vehicle is re-started |
| The vehicle is parked and the electrical horn is activated to indicate a fire in the engine compartment but there is no fire | Short-circuited fire sensor or defective sensor | Cycle the ignition key between the ON and OFF position twice within 3 seconds. This will deactivate the fire alarm function. This has to be repeated each time the vehicle is parked |
| A single light, a group of LED lights or another function of the vehicle is not functioning | The multiplex outputs are protected in current by an internal “soft-fuse”. When an output is shorted, it turns OFF and stays OFF until the "soft-fuse" is reset | Turn the ignition key to the OFF position and turn to the ON position again. This resets all "soft –fuses" |
| No backlighting in the instrument cluster | Circuit breaker CB10 is tripped or fuse F20 blown | <p>Check / reset circuit breaker CB10</p> <p>Check / replace fuse F20</p> |
| The radiator fan clutch does not function and the engine is overheating | | <ol style="list-style-type: none"> 1. Set the ignition key to the ON position. 2. Activate the dashboard Telltale Light Test switch 3 times within 4 seconds. 3. In the engine compartment, set the starter selector switch to REAR START and then start the engine from the rear. <p>While in this mode, the rear start push-button can be used to manually engage the fan clutch. The Multiplex system knows when the engine is already running, and it will not activate the starter.</p> |

| Problem/Symptom | Probable Causes | Actions |
|-----------------|-----------------|---|
| | | <p>4. Press the push-button one time to engage the clutch in 1st speed, press a second time to engage in 2nd speed, press a third time to stop the fan, press once again to return to 1st speed.</p> <p>If the fan clutch does not engage using this procedure then the clutch is faulty or the wiring between the multiplex module and the clutch is faulty. Mechanically lock the fan clutch as described in section 05: COOLING SYSTEM of the maintenance manual.</p> |

DIAGNOSTIC TROUBLESHOOTING CODES (DTC) — ALLISON 4TH GENERATION CONTROLS

DIAGNOSTIC TROUBLESHOOTING CODES (DTC) OVERVIEW

Diagnostic codes (DTC) are numerical indications relating to a malfunction in transmission operation. These codes are logged in a list in the TCM memory with the most severe or most recent code listed first. A maximum of five codes (numbered d1 to d5) may be listed in memory at one time. As codes are added, the oldest inactive code is dropped from the list. If all codes are active, the code with the lowest priority that is not included on the severity list is dropped from the list.

Diagnostic codes (DTC) and code information may be accessed through the pushbutton shift selector or using an Allison DOC™ diagnostic tool.

The TCM separately stores the active and inactive codes. An active code is any code that is current in the TCM decision-making process. Inactive codes are codes that are retained in the TCM memory and will not necessary affect the TCM decision-making process. Inactive codes are useful in determining if a problem is:

- Isolated ;
- Intermittent ;
- Result from a previous malfunction.

The TCM may automatically delete a code from memory if it has not recurred. If the condition which generated the code is active, the LED indicator on the selector will be illuminated simultaneously with the display of the code. If the condition which generated the code no longer exists, the LED is not illuminated and the code is maintained only as a historical record of the prior condition. An illuminated MODE INDICATOR (LED) during normal operation signifies secondary shift mode operation.

DIAGNOSTIC CODES – ALLISON 4TH GENERATION CONTROLS

When the diagnostic mode is entered, the first code (position d1) is displayed as follows:

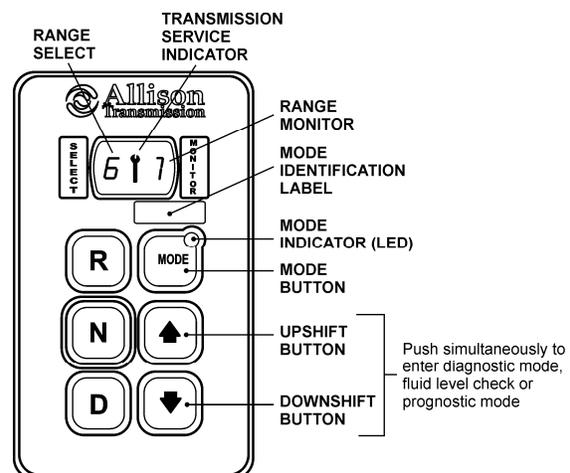

Exemple: Code P0722

Displayed as: **d1...P...07...22**

The code list position is the first item displayed, followed by the DTC. Each item is displayed for about one second. The display cycles continuously until the next code list position is accessed by pressing the **MODE** button. The following example shows how DTC P0722 is displayed on the pushbutton shift selector.

| | | | |
|--------|---|---|---------|
| SELECT | d | 1 | MONITOR |
| | | P | |
| | 0 | 7 | |
| | 2 | 2 | |

- d1 (code list position) – The position which a code occupies in the list. Positions are displayed as « d1 » through « d5 » (code list position 1 through code list position 5).
- P0722 (DTC) – The diagnostic troubleshooting code number referring to the general condition or area of fault detected by the TCM.

DIAGNOSTIC CODE DISPLAY AND CLEARING PROCEDURE – ALLISON 4TH GENERATION CONTROLS

Diagnostic codes can be read and cleared by two methods:

- Using an Allison DOC™ diagnostic tool. For specific instructions on how to use an Allison DOC™ diagnostic tool, refer to the User Guide.
- Using the pushbutton shift selector.

To begin the diagnostic process:

1. Bring the vehicle to a stop at a safe location.
2. Apply the parking brake.

To display stored codes:

1. Simultaneously press the ▲ (Up) and ▼ (Down) arrow buttons five times to access the Diagnostic Display Mode.

NOTE
To access the Oil Level Display Mode, simultaneously press the ▲ (Up) and ▼ (Down) arrow buttons once. Consult paragraph: « ALLISON TRANSMISSION OIL LEVEL CHECK USING THE PUSHBUTTON SHIFT SELECTOR » at the end of this section.

2. Observe the digital display for code (d1).
3. Press the MODE button to see the next code (d2) – repeat for subsequent codes (d3, d4 & d5).

NOTE
Be sure to record all codes displayed before they are cleared. This is essential for troubleshooting.

NOTE
The Diagnostic Display Mode can be entered for viewing codes at any speed. Codes can only be cleared when the output speed = 0 and no output speed sensor failure is active

Active indicators (MODE INDICATOR LED) and inactive codes can be cleared manually, while in the diagnostic display mode, after the condition causing the code is identified.

To clear active indicators and inactive codes:

1. While in Diagnostic Display Mode, press and hold the MODE button for 10 seconds to clear both active indicators and inactive codes.
2. Begin operating as normal. Have the transmission checked at the earliest opportunity by an Allison Transmission distributor or dealer.

NOTE
*All active indicators are cleared at TCM power down.
 Some codes will clear their active indicator when the condition causing the code is no longer detected by the TCM.*

190 Appendix C – Allison Diagnostic Troubleshooting Codes

The Diagnostic Display Mode can be exited by any of the following methods:

- Press simultaneously the ▲ (Up) and ▼ (Down) arrow buttons at the same time on the pushbutton shift selector.
- Press any range button «D», «N» or «R» on the pushbutton shift selector (the shift will be commanded if it is not inhibited by an active code).
- Wait until the calibrated time (approximately 10 minutes) has passed. The system will automatically return to the normal operating mode.
- Turn off power to the TCM (shut off the engine using the ignition key).

| |
|--------------------|
| <i>NOTE</i> |
|--------------------|

| |
|--|
| <i>If clearing a code while locked in a «D» (Drive) or «R» (Reverse) position (fail-to-range), the transmission will still be in «D» (Drive) or «R» (Reverse) when the clearing procedure is completed. «N» (Neutral) must be manually selected.</i> |
|--|

DIAGNOSTIC CODE RESPONSE

The following responses are used in the "Diagnostic Troubleshooting Code List and Inhibited Operation Description" table to command safe operation when diagnostic codes are sent.

DNS - Do Not Shift Response

Release lock up clutch and inhibit lock up operation.

Inhibit all shifts.

Turn *ON* the CHECK TRANS light.

Display the range attained.

Ignore any range selection inputs from the shift selector.

DNA - Do Not Adapt Response

The TCM stops adaptive shift control while the code is active.

SOL OFF - SOLenoid OFF Response

All solenoids are commanded *OFF* (turning solenoids "A" and "B" off electrically cause them to be on hydraulically).

RPR - Return to Previous Range Response

When the speed sensor ratio or C3 pressure switch test associated with a shift not successful, the TCM commands the same range as commanded before the shift.

NNC - Neutral No Clutches Response

When certain speed sensor ratio or C3 pressure switch tests are not successful, the TCM commands a neutral condition with no clutches applied.

ALLISON TRANSMISSION DIAGNOSTIC TROUBLESHOOTING CODES (DTC) AND DESCRIPTIONS

| DTC | Description | CHECK TRANS Light | Inhibited Operation Description |
|------------|---|--------------------------|---|
| C1312 | Retarder Request Sensor Failed Low | No | May inhibit retarder operation if not using J1939 datalink |
| C1313 | Retarder Request Sensor Failed High | No | May inhibit retarder operation if not using J1939 datalink |
| P0122 | Pedal Position Sensor Low Voltage | No | Use default throttle values. Freezes shift adapts. |
| P0123 | Pedal Position Sensor High Voltage | No | Use default throttle values. Freezes shift adapts. |
| P0218 | Transmission Fluid Over Temperature | No | Use hot mode shift schedule. Holds fourth range. TCC is inhibited. Freezes shift adapts. |
| P0561 | System Voltage Performance | | |
| P0562 | System Voltage Low | | |
| P0563 | System Voltage High | | |
| P0602 | TCM Not Programmed | Yes | Lock in Neutral |
| P0610 | TCM Vehicle Options (Trans ID) Error | Yes | Use TID A calibration |
| P0613 | TCM Processor | No | All solenoids off |
| P0614 | Torque Control Data Mismatch - ECM/TCM | Yes | Allows operation only in reverse and second range. |
| P0634 | TCM Internal Temperature Too High | Yes | SOL OFF (hydraulic default) |
| P063E | Auto Configuration Throttle Input Not Present | Yes | Use default throttle values |
| P063F | Auto Configuration Engine Coolant Temp Input Not Present | No | None |
| P0658 | Actuator Supply Voltage 1 (HSD1) Low | Yes | DNS, SOL OFF (hydraulic default) |
| P0659 | Actuator Supply Voltage 1 (HSD1) High | Yes | DNS, SOL OFF (hydraulic default) |
| P0667 | TCM Internal Temperature Sensor Circuit Range / Perform | | |
| P0668 | TCM Internal Temperature Sensor Circuit Low | | |
| P0669 | TCM Internal Temperature Sensor Circuit High | | |
| P0701 | Transmission Control System Performance | | |
| P0702 | Transmission Control System Electrical (TransID) | Yes | Use TID A calibration |
| P0703 | Brake Switch Circuit Malfunction | No | No Neutral to Drive shifts for refuse packer. TCM inhibits retarder operation if a TPS code is also active. |
| P0708 | Transmission Range Sensor Circuit High Input | Yes | Ignore defective strip selector inputs |
| P070C | Transmission Fluid Level Sensor Circuit – Low Input | No | None |
| P070D | Transmission Fluid Level Sensor Circuit – High Input | No | None |
| P0711 | Transmission Fluid Temperature Sensor Circuit Performance | Yes | Use default sump temp |
| P0712 | Transmission Fluid Temperature Sensor Circuit Low Input | Yes | Use default sump temp |
| P0713 | Transmission Fluid Temperature Sensor Circuit High Input | Yes | Use default sump temp |
| P0716 | Turbine Speed Sensor Circuit Performance | Yes | DNS, Lock in current range |
| P0717 | Turbine Speed Sensor Circuit No Signal | Yes | DNS, Lock in current range |
| P071A | RELS Input Failed On | Yes | Inhibit RELS operation |
| P071D | General Purpose Input Fault | Yes | None |

192 Appendix C – Allison Diagnostic Troubleshooting Codes

| DTC | Description | CHECK TRANS Light | Inhibited Operation Description |
|------------|---|--------------------------|--|
| P0720 | Output Speed Sensor Circuit | | |
| P0721 | Output Speed Sensor Circuit Performance | Yes | DNS, Lock in current range |
| P0722 | Output Speed Sensor Circuit No Signal | Yes | DNS, Lock in current range |
| P0726 | Engine Speed Sensor Circuit Performance | No | Default to turbine speed |
| P0727 | Engine Speed Sensor Circuit No Signal | No | Default to turbine speed |
| P0729 | Incorrect 6 th Gear Ratio | Yes | DNS, Attempt 5 th , then 3 rd |
| P0730 | Incorrect Neutral Gear ratio | | |
| P0731 | Incorrect 1 st Gear ratio | Yes | DNS, Attempt 2 nd , then 5 th |
| P0732 | Incorrect 2 nd Gear ratio | Yes | DNS, Attempt 3 rd , then 5 th |
| P0733 | Incorrect 3 rd Gear ratio | Yes | DNS, Attempt 4 th , then 6 th |
| P0734 | Incorrect 4 th Gear ratio | Yes | DNS, Attempt 5 th , then 3 rd |
| P0735 | Incorrect 5 th Gear ratio | Yes | DNS, Attempt 6 th , then 3 rd , then 2 nd |
| P0736 | Incorrect Reverse Gear ratio | Yes | DNS, Lock in Neutral |
| P0741 | Torque Converter Clutch System Stuck Off | Yes | None |
| P0776 | Pressure Control Solenoid 2 Stuck Off | Yes | DNS, RPR |
| P0777 | Pressure Control Solenoid 2 Stuck On | Yes | DNS, RPR |
| P0796 | Pressure Control Solenoid 3 Stuck Off | Yes | DNS, RPR |
| P0797 | Pressure Control Solenoid 3 Stuck On | Yes | DNS, RPR |
| P0842 | Transmission Pressure Switch 1 Circuit Low | Yes | DNS, Lock in current range |
| P0843 | Transmission Pressure Switch 1 Circuit High | Yes | DNS, Lock in current range |
| P0847 | Transmission Pressure Switch 2 Circuit Low | | |
| P0848 | Transmission Pressure Switch 2 Circuit High | | |
| P088A | Transmission Fluid Filter Deteriorated | | |
| P088B | Transmission Fluid Filter Very Deteriorated | | |
| P0880 | TCM Power Input Signal | No | None |
| P0881 | TCM Power Input Signal Performance | No | None |
| P0882 | TCM Power Input Signal Low | Yes | DNS, SOL OFF (hydraulic default) |
| P0883 | TCM Power Input Signal High | No | None |
| P0894 | Transmission Component Slipping | Yes | DNS, Lock in first |
| P0960 | Pressure Control Solenoid Main Mod Control Circuit Open | Yes | None |
| P0961 | Pressure Control Solenoid (PCS) MM System Performance | | |
| P0962 | Pressure Control Solenoid Main Mod Control Circuit Low | Yes | DNS, SOL OFF (hydraulic default) |
| P0963 | Pressure Control Solenoid Main Mod Control Circuit High | Yes | None |

| P2743 | Retarder Oil Temperature Sensor Circuit – High Input | No | Use default retarder temp values |
| P2761 | TCC PCS Control Circuit Open | Yes | Inhibit TCC operation |
| P2762 | TCC PCS Control Circuit Range / Performance | | |
| P2763 | TCC PCS Control Circuit High | Yes | Inhibit TCC operation |
| P2764 | TCC PCS Control Circuit Low | Yes | 7-speed: Allow 2 through 6, N, R. Inhibit TCC operation |
| P2772 | Four Wheel Drive Low Switch Circuit Performance | | |
| P278A | Kickdown Input Failed ON | No | Inhibit kickdown operation |

194 Appendix C – Allison Diagnostic Troubleshooting Codes

| DTC | Description | CHECK TRANS Light | Inhibited Operation Description |
|-------|---|-------------------|---|
| P2793 | Gear Shift Direction Circuit | Yes | Ignores PWM input from shift selector |
| P2808 | Pressure Control Solenoid 6 (PCS6) Stuck Off | Yes | DNS, RPR |
| P2809 | Pressure Control Solenoid 6 (PCS6) Stuck On | Yes | DNS, RPR |
| P2812 | Pressure Control Solenoid 6 (PCS6) Control Circuit Open | Yes | DNS, SOL OFF (hydraulic default) |
| P2813 | Pressure Control Solenoid (PCS) 6 System Performance | | |
| P2814 | Pressure Control Solenoid 6 (PCS6) Control Circuit Low | Yes | DNS, SOL OFF (hydraulic default) |
| P2815 | Pressure Control Solenoid 6 (PCS6) Control Circuit High | Yes | DNS, SOL OFF (hydraulic default) |
| U0001 | Hi Speed CAN Bus Reset Counter Overrun (IESCAN) | No | Use default values, inhibit SEM |
| U0010 | CAN BUS Reset Counter Overrun | No | Use default values, inhibit SEM |
| U0100 | Lost Communications with ECM/PCM (J1587) | Yes | Use default values |
| U0103 | Lost Communication with Gear Shift Module (Shift Selector) 1 | Yes | Maintain range selected, observe gear shift direction circuit |
| U0115 | Lost Communication with ECM | Yes | Use default values |
| U0291 | Lost Communication with Gear Shift Module (Shift Selector) 2 | Yes | Maintain range selected, observe gear shift direction circuit |
| U0304 | Incompatible Gear Shift Module 1 (Shift Selector) ID | Yes | Ignore shift selector inputs |
| U0333 | Incompatible Gear Shift Module 2 (Shift Selector) ID | Yes | Ignore shift selector inputs |
| U0404 | Invalid Data Received From Gear Shift Module (Shift Selector) 1 | Yes | Maintain range selected, observe gear shift direction circuit |
| U0592 | Invalid Data Received From Gear Shift Module (Shift Selector) 2 | Yes | Maintain range selected, observe gear shift direction circuit |

ALLISON TRANSMISSION OIL LEVEL CHECK USING THE PUSHBUTTON SHIFT SELECTOR

Oil level codes are obtained as follows:

1. Park vehicle on a level surface, select «N» (neutral) on the pushbutton shift selector and apply parking brake.
2. Press simultaneously the ▲ (Up) and ▼ (Down) arrow buttons once.
3. Oil level codes are displayed in 2 minutes (e.g. display will flash and 8, 7, 6, 5, ...; countdown will occur during the 2 minutes) once the following parameters are met:
 - **Waiting time, vehicle must be stationary for at least 2 minutes to allow the oil to settle;**
 - **Engine at idle;**
 - **Oil at normal operating temperature, between 140°F (60°C) and 220°F (104°C);**
 - **Transmission in «N» (Neutral);**
 - **Transmission output shaft stopped;**
 - **Oil level sensor present and working.**

After 2 minutes, the display will flash one of the codes shown below:

| CODE | CAUSE OF CODE |
|----------------|---|
| O L...O K | Oil level is correct |
| O L...L O... 1 | Oil Level is LOw 1 quart |
| O L...L O... 2 | Oil Level is LOw 2 quart |
| O L...L O... 3 | Oil Level is LOw 3 quarts |
| O L...L O... 4 | Oil Level is LOw 4 or more quarts |
| O L...H I... 1 | Oil Level is Hlgh 1 quart |
| O L...H I... 2 | Oil Level is Hlgh 2 quarts |
| O L...H I... 3 | Oil Level is Hlgh 3 or more quarts |
| O L... – (fc) | Oil Level is invalid. Source of invalid reading is defined by a two-character fault code (fc) |

NOTE

Note that the quantities LO 4 and HI 3 are the largest values displayed and that the actual variation in oil level may exceed these numbers.

NOTE

Failure to meet one of the above parameters will stop the two minute countdown. One of the codes shown hereafter will indicate the cause of the countdown interruption. Once all parameters are met, the countdown will continue from where it left off.

If the fluid level check cannot be completed, an Invalid for Display fault is reported. This condition is reflected by the display of "OL", followed by "–", followed by one or two additional characters. The displayed characters define the cause of the fault, which may be either a system malfunction or an improper condition for conducting the check.

| CODE | CAUSE OF CODE |
|-------------|--------------------------------|
| OL...-...0X | Waiting period is not complete |
| OL...-...EL | Engine speed (rpm) too low |
| OL...-...EH | Engine speed (rpm) too high |
| OL...-...SN | N (neutral) must be selected |
| OL...-...TL | Sump oil temperature too low |
| OL...-...TH | Sump oil temperature too high |
| OL...-...SH | Output shaft rotation |
| OL...-...FL | Sensor failure |

EXITING THE FLUID LEVEL DISPLAY MODE

To exit the Oil Level Display Mode, press any range button: «R», «N» or «D» at any time.

CONTROL SYSTEM PROGNOSTICS

The transmission control system includes the provision for the user to monitor various transmission operating parameters. Transmission operating parameters monitored by the prognostics feature are:

- Oil Life Monitor
- Filter Life Monitor
- Transmission Health Monitor

NOTE

*The prognostics package requires the use of TranSynd™ or an Allison approved TES-295 licensed fluid in the transmission and Allison High Capacity filters. If any other fluids or filters are used, Prognostic mode **must be disabled**. Prognostic information will not be accurate with any other fluids or filters and could result in missed maintenance activities resulting in transmission damage.*

Refer to TES 295 Approved Fluids list, found under the Service/Fluids heading on the home page of the Allison Transmission web site.

www.allisontransmission.com

When a specified threshold is detected for any of the serviceable conditions, the TRANSMISSION SERVICE indicator  is illuminated to alert the operator. Failure to attend to the service condition and reset the TRANSMISSION SERVICE indicator within a defined operating period will result in illumination of the CHECK TRANS light on the dashboard telltale panel, indicating the increased probability that the service condition will develop into a more serious condition.

To access the Prognostic Mode functions, simultaneously press the  (Up) and  (Down) arrow buttons repeatedly. See the reference table at the end of this section.

OIL LIFE MONITOR

The display message denotes the calculated remaining life of the transmission fluid. This value is based on the established life for the required baseline fluid, and then is continuously adjusted for cumulative effects of such operating parameters as operating time, retarder operation, output shaft revolutions and shift frequency.

Display: The display is a two-digit number, denoting percentage of the fluid life which remains. New fluid is displayed as 99%.

The TRANSMISSION SERVICE indicator  will be illuminated, denoting a required change of transmission fluid, when the remaining fluid life reaches approximately 1–2 %. The indicator will be lit steadily upon each initialization of the TCM, and will remain on steady for approximately 1–2 minutes after the first selection of “D” (drive) range each time, until service is performed and the indicator is reset.

Failure to perform maintenance and reset the TRANSMISSION SERVICE indicator within a defined period will result in the illumination of the CHECK TRANS light on the dashboard telltale panel and diagnostic code P0897 Transmission Fluid at Limit will be set.

Reset: The TRANSMISSION SERVICE indicator can be reset by a message over the SAE J1939 communication interface, with the Allison DOC™ for PC diagnostic program, or by depressing and holding the MODE button for ten (10) seconds while the Oil Life Monitor function is displayed. It may also be reset by selecting N-D-N-D-N-R-N on the shift selector, pausing briefly (less than 3 seconds) between each selector movement, with the ignition on and the engine not running.

CAUTION

Required calendar-based oil & filter change intervals (based on month) still apply because Oil Life Monitor function cannot measure time while ignition power is OFF.

If the Oil Life Monitor function has not indicated the need for a fluid change before 60 month (five years) have passed, it will be necessary to change the fluid and filters per calendar requirements and reset the system.

FILTER LIFE MONITOR

The display message denotes operating status of the transmission main fluid filter, based on the measured pressure drop across the filter. The feature is not functional at transmission sump temperatures below 40 °C (105 °F). Both the main and lube filters **must be** changed when the TRANSMISSION SERVICE indicator  shows the main filter should be changed.

Display: An acceptable filter life status is displayed as "OK". An unacceptable filter life status is displayed as "LO".

Once the programmed threshold for maximum filter pressure drop has been observed and verified, the diagnostic code P088A Transmission Filter At/Over Limit will be recorded to indicate that the filter has reached the end of its designed life. At the next initialization of the TCM, the TRANSMISSION SERVICE indicator  will flash for approximately 1–2 minutes after the first selection of "D" (drive) range. Thereafter, the indicator will illuminate and flash upon each TCM initialization, continuing to flash for 1–2 minutes after the first selection of a drive range each time, until service is performed and the indicator is reset.

Failure to perform maintenance and reset the monitor after a calibration-defined number of warnings will result in the illumination of the CHECK TRANS light on the dashboard telltale panel and diagnostic code P088B will be recorded to indicate a highly deteriorated filter.

Reset: The feature will reset automatically when the main fluid filter has been changed and the pressure drop across the filter no longer exceeds the threshold value. A manual reset can be performed by depressing and holding the MODE button for ten (10) seconds while the Filter Life Monitor function is displayed. It may also be reset by selecting N-R-N-R-N-D-N on the shift selector, pausing briefly (less than 3 seconds) between each selector movement, with the ignition on and the engine not running.

TRANSMISSION HEALTH MONITOR

The display message denotes clutch life status, as determined by monitored changes and the calculated running clearance of the transmission clutches C1, C2, C3, C4 & C5.

Display: An acceptable clutch life status is displayed as "OK". An unacceptable clutch life status is displayed as "LO". The specific clutch(es) for which the function indicates "LO" cannot be identified with the shift selector. Allison DOC™ for PC-Service Tool displays clutch condition as OK or NOT OK for each clutch, C1 through C5.

The TRANSMISSION SERVICE indicator will be illuminated, indicating the need for clutch maintenance, when the remaining clutch life reaches approximately 10%, or if the running clearance exceeds a maximum value which may indicate a non-wear-related issue. Thereafter, the indicator will be lit upon each initialization of the TCM, and will remain on steady during all vehicle operation until service is performed and the indicator is reset.

Failure to perform maintenance and reset the monitor after a number of warnings will result in the illumination of the CHECK TRANS light on the dashboard telltale panel and diagnostic code P2789 Clutch Adaptive learning at Limit will be set.

Reset: The feature will reset automatically upon elimination of the clutch clearance condition which initiated it. The indicator can also be manually reset using the Allison DOC™ for PC diagnostics program if necessary.

198 Appendix C – Allison Diagnostic Troubleshooting Codes

| ▲ (up) & ▼ (down) arrow buttons pressed simultaneously | Description | SELECT | MONITOR |
|--|--|---|---|
| 1 st press | Allison transmission oil level check Other codes will be displayed | " _ " | " _ " |
| 2 nd press | Oil Life Monitor Oil life remaining will range from 99% down to 00% | " O " Some number from 9 to 0 | " M " Some number from 9 to 0 |
| 3 rd press | Filter Life Monitor Present life of filter is OK Present life of filter is low | " F " " O " " L " | " M " " K " " O " |
| 4 th press | Transmission Health Monitor Shows "OK" until remaining life of one or more of the clutch(es) wear enough so that the programming changes One or more of the clutches C1 through C5 have worn enough to change the program | " O " " O " " L " | " K " " K " " O " |
| 5 th press | Display of diagnostic codes Other codes will be displayed | " d " | " 1 " |

Appendix D – Spheros Preheater Flash Codes 199

OPERATIONAL FAILURE SYMPTOMS VIA FAULT/FLASH CODE

The following table lists the possible faults which can be read by flashing code off of an appropriate timer, the equipment-on indicator /operation indicator flashes.

| Failure Symptom | Probable Cause | Check and Correct |
|--|---|---|
| 1X Flash (F 01) No combustion after completion of start up sequence. | - Fuel system - Combustion air - Electronic ignition | - Fuel level - Type of fuel being used - Fuel filter - Fuel line connections (air bubbles in fuel lines) - Fuel nozzle plugged - Air intake or exhaust, restricted or plugged - Incorrect electrode gap |
| 2X Flashes (F 02) Flame out during burner operation no restart possible | - Fuel supply (shortage of fuel) | - Restriction in the fuel system - Fuel filter - Fuel line connections (air bubbles in fuel lines) - Type of fuel being used |
| 3X Flashes (F 03) Low voltage for more than 20 seconds | - Electrical system | - Load test batteries - Corrosion at connections - Loose connections |
| 4X Flashes (F 04) Flame detector recognizes false flame signal during pre-start or shut-down cycle | - Defective flame detector | - Replace flame detector |
| 5X Flashes (F 05) Flame detector | - Wiring - Defective flame detector | - Damaged wiring, open or short circuit - Replace flame detector |
| 6X Flashes (F 06) Temperature sensor | - Wiring - Defective temperature sensor | - Damaged wiring, open or short circuit - Replace temperature sensor |
| 7X Flashes (F 07) Fuel solenoid valve | - Wiring - Defective solenoid valve | - Damaged or corroded wiring, open or short circuit - Replace solenoid valve |
| 8X Flashes (F 08) Combustion air fan motor | - Wiring - Wrong RPM - Defective combustion air fan motor | - Damaged wiring, open or short circuit - Replace combustion air fan - Replace combustion air fan |
| 9X Flashes (F 09) Circulation pump motor | - Wiring - Defective circulation pump motor | - Damaged wiring, open or short circuit - Replace circulation pump motor |
| 10X Flashes (F 10) Temperature limiter | - Overheat condition - Coolant flow - Wiring - Defective temperature limiter | - Reset temperature limiter - Coolant level or flow restriction - Air trapped in coolant circuit - Damaged or corroded wiring, open or short circuit - Replace temperature limiter |
| 11X Flashes (F 11) Electronic ignition coil | - Wiring - Defective electronic ignition coil | - Damaged wiring, open or short circuit - Replace electronic ignition coil |
| 12X Flashes (F 12) Heater lock out | - 3 repeated faults/flame-outs or 5 repeated start attempts | - Reinitialize control unit by switching heater on and disconnecting power. |
