

Date: **Octobre 1996**
 Section: **18**
 Sujet: **DÉFECTUOSITÉ DU SIÈGE DU CONDUCTEUR**

Application:

Modèle	VIN
	
Tous les autocars livrés entre le 1 ^{er} Janvier 1996 et le 4 Octobre 1996 Année modèle: 1996-1997	Entre 2PCH33498I1011356 et 2PCH33496V1011681 Entre 2PCL33493T1025787 et 2PCL33492V1026012
Toutes les maisons motorisées livrées entre le 1 ^{er} Janvier 1996 et le 4 Octobre 1996 Année modèle: 1996-1997	Entre 2PCM33494T1025737 et 2P9M33490V1026031 Entre 2PCV33492T1011310 et 2PCV33493T1011610

DESCRIPTION

La compagnie Isringhausen Inc a déterminé qu'un défaut de fabrication existe sur quelques châssis de siège du conducteur. Deux soudures localisées sur le côté du dossier d'ajustement du châssis ne rencontrent pas les spécifications et peuvent se briser. En conséquence, le dossier du siège peut subitement arrêter de supporter le dos du conducteur et alors provoquer un accident grave. **Ceci est une campagne de rappel.**

Avant de remédier à la situation, il est important de déterminer si le châssis du siège du conducteur n'est pas conforme.

MARCHE À SUIVRE

Avertissement: Stationner le véhicule de façon sécuritaire, appliquer le frein de stationnement, arrêter le moteur et placer l'(les) interrupteur(s) principal(aux) à la position ARRÊT (OFF) avant de travailler sur le véhicule.

1. Localiser et prendre en note le numéro de série du siège du conducteur.
 - A. Pour un siège avec suspension, le numéro de série est sur le sous-châssis de la suspension (voir Fig. 4 du bulletin FB96E-021 inclus à la fin de ce document).
 - B. Pour un siège sans suspension, le numéro de série est sur le support avant du châssis (voir Fig.4 du bulletin FB96E-021 inclus à la fin de ce document).
2. La liste ci-jointe avec ce document indique les numéros de séries de tous les sièges installés entre le premier Janvier 1996 et le 4 octobre 1996. Vérifier si le numéro de votre siège est dans cette liste. Les sièges dont leur numéro est dans cette liste ont des châssis dont la conformité est discutable.
3. Si un châssis a un "M" ou un "MM" d'imprimé sur son support avant (voir Fig.4 du bulletin FB96E-021

inclut à la fin de ce document), il est conforme avec les spécifications et ne requiert pas d'inspection.

4. **Si le numéro de série est dans la liste et le châssis n'a pas de "M" ou de "MM" d'imprimé sur son support avant, le siège doit être inspecté selon les étapes du bulletin FB96E-021 inclus à la fin de ce document.**
5. Si le châssis est non-conforme, la procédure suivante doit être exécutée.

CHÂSSIS NON-CONFORME

1. Contacter immédiatement le "Product Service Department of Isringhausen, Inc." au numéro suivant: 616-968-5333 ext. 301.
2. Le "Product Service Department" déterminera si le châssis du siège est non-conforme. Si la déposition requiert le retour du châssis à la compagnie Isringhausen, le "Product Service Department" fournira un numéro RMA qui accompagnera le châssis retourné. De plus, le client doit envoyer le numéro de série du siège, une photocopie des immatriculations du véhicule et une description écrite des réparations ou autres modifications déjà effectuées sur le siège. La compagnie Isringhausen déterminera le moyen de transport du châssis qui doit être retourné **sans le recouvrement** à l'adresse suivante:

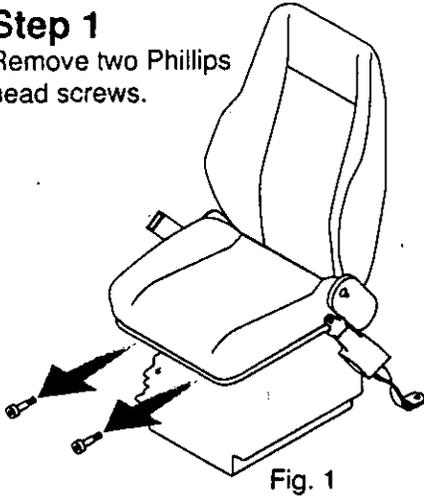

Att: Product Service Department - FB96E-021
RMA Number - 9XXXX
Isringhausen, Inc.
5450 W.Dickman Road
Battle Creek, MI, 49015

3. La compagnie Isringhausen Inc. identifiera le châssis du siège assemblé et enverra au client, à leur frais, un châssis de remplacement **sans recouvrement** incluant les contrôles.

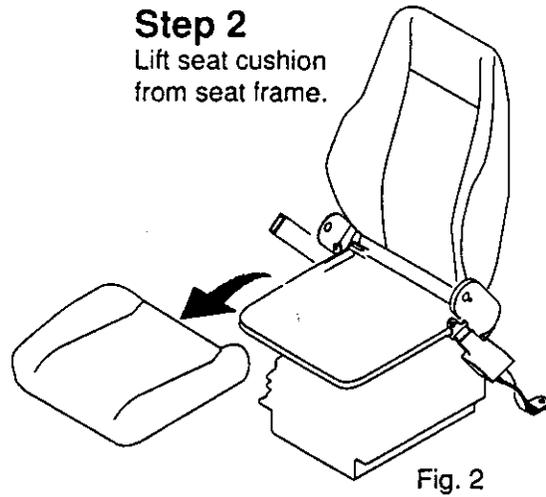

GARANTIE

Cette modification est couverte par la garantie normale du manufacturier du siège. Le client doit prendre entente avec ce dernier pour la main-d'oeuvre. **Il est important de retourner la feuille de certification de campagne de rappel à Prévost Car Inc. en mentionnant "Bulletin de Garantie 96-26".**

Step 1
Remove two Phillips
head screws.

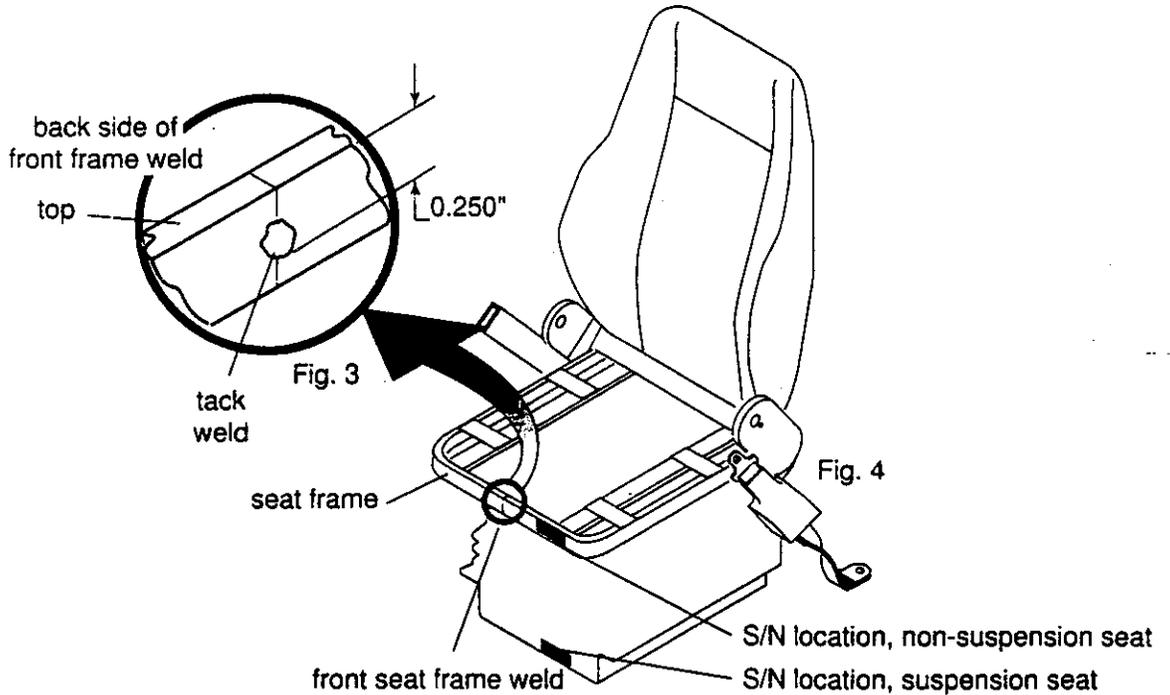

Step 2
Lift seat cushion
from seat frame.

Step 3

Inspect backside of the vertical weld found on the front of the seat frame (Fig. 3). If the bottom edge of the tack weld found there is located more than 1/4" (0.250") from the top edge of the seat frame, the frame is not suspect. If the weld is within 1/4" (0.250") of the top of the frame, or the frame does not have a tack weld at all, the frame may not meet our design specifications.

Step 4

Conforming seat frames -- install seat cushion, tabs must be under tube. Replace Phillips head screws and tighten. Seat may be put in service.
